COMP 3350 Project Iteration 0

Group 3(The Job Costing Application)

Vision: 7/7

- Vision summary
- Vision statement
- Does it conform with the interview?

The vision statement reflects the interview but you have emphasized on features that are not currently included in manual process using excel. You should have also highlighted the automation of the existing functionalities aside from add on features like search and filter. Also the export feature seems to be a priority for your client you might as well consider that if and only if you have completed all the fundamental features. Also a bonus point since your client is actual company that might eventually use your product. Your success criteria should be in measurable form.

Planning: 7/8

- Big user stories for all iterations
- Detailed user stories for iteration 1
- Does it follow the preferences of the customer based on the interview?

First comment would be on page 7 of your document, the image is blur. Although it is readable but it would nice if you want to take a photo, make sure it is sharp and readable. Those with itr1 I assumed are your detailed stories, please next time specify clearly which are your big stories and which are their respective breakdown detailed stories. For your next iteration bundle the big stories and their respective detailed stories plus take into account the total cost allocated for detailed stories can't exceed its big story.

Total: 14/15
